

AGILE ASSESSMENT WORKSHOPS

Agile Assessments provide an effective and easy way to uncover the necessary steps to set your company up for a successful Agile Transformation. Many companies embark on an Agile journey only to find out after launching Agile that they are struggling to achieve the desired results. Our workshops are designed to help organizations evaluate their current approach and provide tangible recommendations to achieve the full benefits of Agile. We offer two variations of Agile Assessments depending on the stage of your Agile Transformation.

WORKSHOP I - STARTING THE AGILE JOURNEY

This workshop will prepare our clients for their agile journey by evaluating their readiness for the change. Our experts will partner closely with clients to uncover obstacles and share insights on how to best prepare your organization for an Agile operating model.

WORKSHOP II - EVALUATING YOUR AGILE TRANSFORMATION PROGRESS

This workshop will allow our clients to work hand-in-hand with an agile expert to outline the current challenges with adoption, assess current processes and practices, and to provide tactical recommendations for how to improve your organization's agile adoption. This is a custom engagement tailored to address your company's present needs and high priority adoption blockers.

LEARN TO

- Apply Agile principles effectively
- Empower your teams for success
- Identify the necessary tools for your Agile Transformation
- Categorize product/service lines
- Conduct future Agile evaluations
